

59. The demultiplexing method of claim 57 wherein the first encoded digital audio channel comprises a first language and the second encoded digital audio channel comprises a second language.

60. The demultiplexing method of claim 56 wherein the method also includes in step A recovering slot mapping information from a mapping information slot in each said frame.

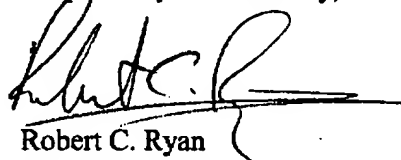

61. The demultiplexing method of claim 59 wherein the method also includes in step (A) first recovering slot mapping information regarding said one data slot, said first data slot, and said second data slot from a mapping information slot in said frame.

REMARKS

Claims 1-25 were pending in this application as originally filed. By this amendment, claims 1-25 are cancelled without prejudice and claims 26-61 are presented for examination.

Early favorable action is respectfully requested.

Respectfully submitted by,

Robert C. Ryan
